Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a gastrointestinal stimulation device with an expandable member fixation device, classified in class 607, subclass 40.
- II. Claims 13-16, drawn to a gastrointestinal stimulation device and method of use, classified in class 607, subclass 40.
- III. Claims 17-22, drawn to a method for treating obesity classified in class 607, subclass 40.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation in that the method does not call for anchoring as in both stimulation devices, and the two stimulation devices have different anchoring particulars thus making them individually distinct. Inventions II and III are additionally distinct in that different effects are achieved, i.e. controlling pyloric contraction and controlling obesity.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
